Response to Amendment

1. The indicated allowability of claims 1-16 is withdrawn in view of the newly discovered reference(s) to the Examiner. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Unland et al (US 5,743,233).

Regarding claim 1, the reference of Unland et al discloses an apparatus for controlling air-fuel ratio for internal combustion engine including the following subject matters:

a) providing at least one knock sensor that generates a knock sensor signal (col. 3, lines 35-40, and claim 1);

b) measuring a signal strength of said knock sensor signal during operation of said internal combustion engine (col. 3, line 61 through col. 4, line 31);

c) determining a reference level for said knock sensor signal, said reference level varying according to a noise level or sound level of the internal combustion engine (col. 2, line 20 through col. 3, line 29);

d) limiting an increase in the reference level in a predetermined manner considering at least one of an allowed reference level range and a gradient that is a measure of an amount of reference level change (above discussions, and see fig. 2 for the detail); and

Art Unit: 3747

e) establishing whether or not knock is occurring by comparing said signal strength obtain during the measuring of step a) with said reference level that is limited according to step d) (above discussions).

Regarding claims 2-16, as discussed in claim 1.
